

This graphic illustrates a typical breaking putt

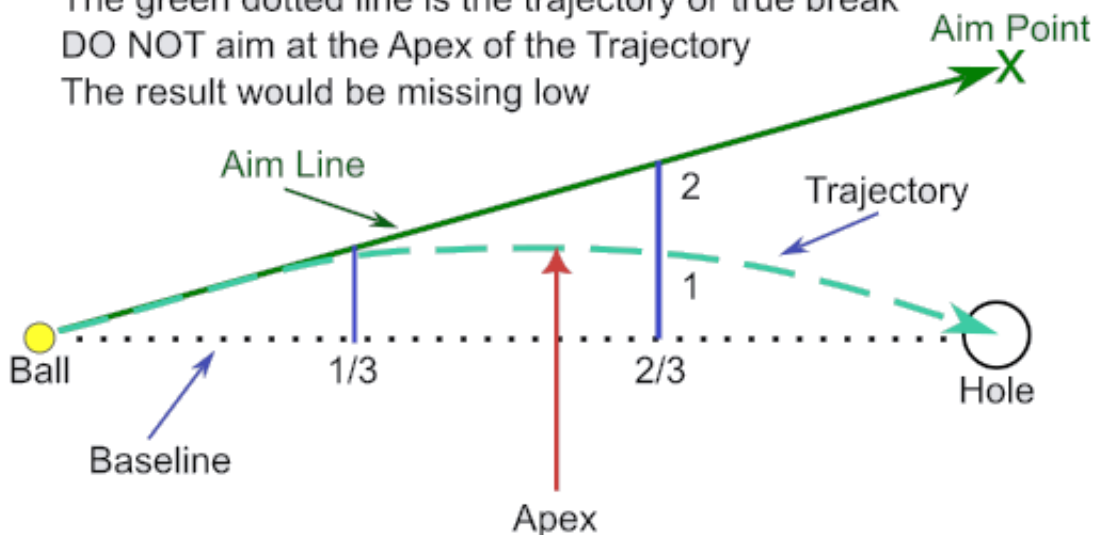

The Aim Point is "where to aim"

The aim line is the line tangent to the trajectory

The green dotted line is the trajectory or true break

DO NOT aim at the Apex of the Trajectory

The result would be missing low

According to putting expert Phil Kenyon

There is a useful reference at 2/3 of the way to the hole

That is where you could predict the aim line

It would be 2 times the distance from the "baseline"

to the "trajectory" (Noted as 1 & 2 above)
